

ALUCOVERBOND

Colour And Finish Guide

Standard colour series, wood grains, metallic finishes and the custom colour matching process. 36 standard colours in stock, a library of 800+ developed over twenty years.

A2 Fire-Rated Metal Series

Eight core metallic finishes stocked in 1220 × 2440 mm, available in 3 / 4 / 5 / 6 mm thickness. All compatible with the full fire-rated ACP product line.

- Silver · RAL 9006 equivalent
- Brushed · directional grain
- Champagne · RAL 1035 equivalent
- Copper · warm metallic
- Rose Gold · contemporary accent
- Bronze · RAL 1036 equivalent
- Navy · deep architectural
- Charcoal · RAL 7016 equivalent

Wood-Grain Series

Six natural wood tones printed via high-resolution roller transfer — the warmth of wood with the durability of ACP. Realistic grain, fade-resistant color.

- Light Oak · pale, neutral
- Walnut · medium, classic
- Ash · grey-tinted, modern
- Teak · rich, warm
- Charcoal-burnt · smoked accent
- Whitewash · coastal, soft

Solid And Custom Colors

Beyond the stocked series, our color library covers glossy and matte solids, brushed metals and pearlescent effects — and any custom color matched from a physical sample or a Pantone code.

- Solids · pure, uniform, masking-friendly
- Metallics · brushed, mirrored, sparkled
- Pearlescent · angle-shifting effects
- Custom match · sample or RAL / Pantone, about 15 days

Decorative Finishes

Brushed

Directional grain that reads as metal; one of the eight stocked A2 metal finishes

Mirror	High-gloss reflective interior finish, lighter and more impact-resistant than glass
Wooden	Roller-transfer wood grain in six standard tones
Spectra	Colour shifts with viewing angle — best on curves, fins and angled bays
Nacreous	Pearl sheen that changes with light — best on large flat planes
Stone, fabric and leather	Texture finishes for interior and feature work

Custom Colour Matching

Reference accepted	Physical sample of at least 50 × 50 mm, RAL code, Pantone code, or a previous batch reference
Lab-dip	Produced within about 5 days for approval
Measurement	Konica Minolta spectrophotometer
Tolerance, standard colours	$\Delta E \leq 1.0$ under a D65 light source
Tolerance, custom matching	Target $\Delta E \leq 0.8$
MOQ, stocked colour	500 m ² per colour
MOQ, custom colour	1,000 m ² per colour
Lead time, stocked colour	7 days from deposit
Lead time, custom colour	About 15 days from colour approval

Keeping Colour Consistent Across Phases

Standard colours are held against a signed master sample. Tell us at the first order that further phases are planned and we keep the batch reference, so a second container matches the first. Colour-shift and pearlescent finishes are the least forgiving of separate runs — order the full area together where possible.
