

# Air Cushion Machine Comparison

AWPACK-004 and AWPACK-005 compared. Both machines inflate air pillow, air bubble film and air quilt film; the difference is speed and maximum film width.

| Specification  | AWPACK-004                    | AWPACK-005                                      |
|----------------|-------------------------------|-------------------------------------------------|
| Type           | Mini type air cushion machine | Industrial air filling machine                  |
| Max speed      | 10 m/min                      | 28 m/min                                        |
| Film width     | Up to 600 mm                  | 200-800 mm roll film                            |
| Control system | See product page              | PLC                                             |
| Caliber        | See product page              | 50.8 mm                                         |
| Power          | See product page              | AC 220V 50Hz                                    |
| Size           | See product page              | L50 cm * W39 cm * H42 cm                        |
| Weight         | See product page              | 18 kg                                           |
| Suited to      | Small shop                    | Factory or warehouse with high film consumption |

## How to Choose

- Start from your widest carton. If any carton needs film wider than 600 mm, the answer is AWPACK-005.
- Then check throughput. 10 m/min suits a bench running between orders; 28 m/min suits continuous packing.
- The cushion format comes from the film you load, not from the machine, so both models run all formats.
- Order the film and the machine together so the web width and the machine are confirmed as a pair.
