

Motorcycle Parts Catalogue

33 products, CNC cockpit control and chassis hardware

The parts side of the Creease range covers the components a rider changes first: brake and clutch levers, grips, bar ends, riser and triple clamps, rearsets and footpegs, kickstand enlargers, fuel caps, steering dampers and hand guards. Most of these lines are CNC machined from aluminium alloy, anodised in a fixed colour set, and built to a universal fitment pattern that covers the brands listed on each product page.
