

The CRO-300S kitchen waste reduction machine handles the step most composters cannot: separating kitchen waste into oil, water and solid residue before anything else happens to it. It shreds and dehydrates 150-300 kg per hour, extracts oil automatically for recycling, drains water, and discharges residue - which is what keeps a commercial kitchen compliant with HACCP standards and keeps grease out of the drains. Pair it with an electric composter and the two together form a complete on-site loop.

Technical data

Model	CRO-300S
Processing Capacity	150-300KG/Hour
External Dimension	920*690*1100mm
Oil Discharge Method	Self/Manual Oil Discharge
Working Voltage	220V, 50Hz
Rated Power	Heating 3000W without heating 1500W
Net Weight	170KG
Gross Weight	200KG
