

Stainless Steel Anchor Shackles

Shackles are the removable link between chain, rope and fixed hardware. Honke supplies bow, D and long D patterns to both US and European dimensions in stainless steel and carbon steel with a choice of finish.

- 3 items in this range
- US and European patterns from the same factory so your catalogue stays consistent
- Stainless steel for marine work and carbon steel where price leads
- Polished, hot dip galvanised and zinc plated finishes
- Bow shackles for multi leg slings and D shackles for straight line pull

ANCHOR SHACKLE

High Quality US&European Type stainless steel anchor shackle

MATERIAL	Stainless steel, carbon steel
SIZE	Custom size on request
FINISH	Polishing, Hot Dipped Galvanized, Zinc-plated etc
DESIGN	OEM & ODM

Frequently Asked Questions

What is the difference between a bow shackle and a D shackle

A bow shackle has a wide rounded body that can take load from several directions, which suits multi leg slings and mooring. A D shackle is narrow and is meant for straight line pull. A long D gives extra clearance in the same narrow shape.

Which finish should I choose

Polished stainless for boats and visible installations, hot dip galvanised carbon steel for outdoor and agricultural use, zinc plated where the part stays dry.

Are your shackles load rated and marked

Marking and rating vary by pattern and market. Tell us which standard your buyer works to and we will confirm what we can supply on that item before you place the order.

Can you supply captive pin or screw pin versions

Both pin styles are made. Confirm which one you need with the part code when you enquire.

What sizes are available

Shackle sizes on this range are made to order. Send the pin diameter and jaw width your market uses and we will quote against that.
