

Pallet Netting Standard

100% virgin HDPE knitted pallet net

Pallet nets are knitted rather than cast as a sheet, so most of the pallet face stays open. Air moves through the load almost as freely as if it were unwrapped, which is why netting is used where a load must be contained and cooled at the same time. Pallet nets can be customised to your request, and manual and automatic use are both available.

Specification

Item	Specification
Material	100% virgin HDPE
Roll widths	30 cm / 50 cm / 76 cm
Inner core diameter	3 inch or 2 inch, to your request
Manual rolls	500 m to 1000 m
Automatic rolls	3000 m to 4000 m
Application	Manual and automatic use are both available
Customisation	Pallet nets can be customised to your request

Where It Is Used

- Fruit and vegetable crates and bins that must keep cooling after wrapping
- Horticulture and nursery stock needing air and light in transit
- Warm packs from beverage and food filling lines
- Tall stacks of open crates that a tight film would crush
- Operations reducing packaging weight per pallet

Standard Compared With Elastic

HDPE holds its shape at the tension you apply, which suits regular stable loads. The elastic MPE grade stretches 15% to 50% depending on load weight and recovers around the goods, which suits irregular, compressible and settling loads.
