

Lumenlily Crystal Bracelet Care Guide

The care routine we recommend for every bracelet in the range, in the order it should be done. A soft polishing cloth and a set of cleansing stones are included with every order.

Wash every two weeks

Clean the bracelet at least once every two weeks. Wash it with mild soapy water or a dedicated crystal cleaner, then wipe the surface gently with the soft cloth supplied. If it only needs a light clean, the cloth on its own is enough.

Cleanse and energise once a month

Worn continuously, a crystal bracelet gradually spends its energy and takes on negative energy, so it should be cleansed and energised once a month. Spread the cleansing stones supplied evenly in any container and rest the bracelet on top of them.

Keep it away from heat and direct sun

Prolonged high temperatures or direct sunlight can crack a crystal internally or fade its colour and dull its lustre. Keep the bracelet away from heat sources.

Store it away from metal

Crystals are brittle. Do not store crystal jewellery with other metal jewellery, or the two will scratch each other.

Take it off for hard wear

Remove crystal jewellery during strenuous exercise or heavy physical work so an accidental knock does not break a bead.
