

RIDE CATEGORY DATASHEET

Trailer Trampoline And Playground Rides

Trailer-mounted trampoline and playground units plus the pedal-powered race tracks and small carousels that fill out a portable attraction line-up.

What This Category Is For

This range covers the play attractions rather than the mechanical rides: trampoline decks, soft playgrounds and the pedal-driven animal race tracks that farms and carnivals run alongside them. The race tracks are galvanised tube with powder coating, supplied at a 50ft standard length or cut to a length you specify, and they run on rider effort rather than on a motor, which removes the power supply problem entirely.

Why Operators Choose This Range

- Pedal-powered race tracks need no mains supply at all
- Track length supplied at 50ft standard or customised as requested
- Galvanised tube with powder coating for outdoor seasons
- Animal themes across bee, cow, goat, pig, alpaca, reindeer and pumpkin bodies
- Small carousels from 2.1m diameter at 220V/500W for tight indoor footprints

Problems It Solves

- Attractions that need a three-phase supply on a grass field
- Play equipment that cannot be reconfigured when the pitch shape changes
- Tracks supplied at one fixed length that will not fit the available frontage
- Queue throughput too low to justify the pitch fee
- Units that look tired after one season outdoors

Who It Is For

- Farm attractions and pick-your-own sites adding a paid ride
- Carnival operators who need a non-powered attraction for unserviced pitches
- Family entertainment centres building an outdoor overflow area
- School and community event organisers

Application Scenarios

- Farm parks and pick-your-own sites
- Outdoor carnival pitches with no power
- Indoor family entertainment centres with low ceilings
- Seasonal pop-ups in car parks and squares

Materials

- Published per model on the product page; where the manufacturer states no material, the page says so rather than estimating one.

Manufacturing Process

1. Design Review: Dimensions, capacity and theme are agreed in writing before production starts.
2. Fabrication: Structure is fabricated and finished to the specification agreed.
3. Assembly: The unit is assembled complete in the works.
4. Inspection: Fixings, finish and, on powered units, the drive and control panel are checked.
5. Packing: Packed for container loading with decorative surfaces protected.
6. Loading: Loading photographs are sent before the container leaves.

Customisation Options

- Theme, colours and printed graphics changed before production
- Supply voltage built to your site: 110V, 220V or 380V depending on the model

- Dimensions and capacity adjusted where the structure allows
- Custom design is marked acceptable across every category on the source catalogue

Certification Standards

The company holds ISO 9001:2015 quality system, certificate 4742SQ0047805, scoped to sales and export of amusement equipment, CE attestations of conformity under Machinery Directive 2006/42/EC held by product family, ECM certificate 0P241231.ZBAWW48 for amusement rides, referencing EN 13814-1:2019+A1:2023 and EN 1176-1:2017+A1:2023, Ask for the attestation covering the product family this model belongs to before shipment. Attestations are issued by product family and are sent on request.

Questions Buyers Ask

Do the animal race tracks need electricity?

No. The catalogue lists the working way as pedal bike, so the riders drive the cars themselves. That is why these units suit grass pitches with no supply.

Can the track be made longer or shorter than 50ft?

Yes. The published specification is 50ft long standard or customised as requested.

What are the tracks made from?

Galvanised tubes with powder coating, as listed in the source specification for the race range.

How many riders does a race track take at once?

It depends on the number of cars supplied with the track, which is agreed per order. The source site does not publish a fixed figure for every model.

Are the small carousels suitable indoors?

The 6 Kids Macaron Carousel is 2.1m diameter and 2.6m high on 220V/500W, which is a single-phase indoor footprint. Check your ceiling height against the published 2.6m before ordering.
