

## PRODUCT FAMILY DATASHEET

## Cue Tips

Multi-layer and single-layer leather cue tips from 9 mm to 14 mm, sold individually and in 50-piece factory packs.

### What This Family Is For

A tip is the only part of a cue that touches the ball, and it is the part a room replaces most. This family publishes diameter in millimetres, hardness where the listing states it, and whether the tip is multi-layer or single leather, so a club can reorder the same tip rather than the nearest photograph.

### Products In This Family

| Product                                                                                                                       | Group   | Summary                                                                        |

| Lead time                               | Not published on the source listing           |

Figures are reproduced from the manufacturer's published listings and may be revised. Rows reading 'not published' are figures the source listing does not publish; they are confirmed in writing rather than estimated. Confirm the current revision with your quotation.

## Why Buyers Choose This Range

- Diameters published per product across the 9 mm to 14 mm band
- Multi-layer and single leather listings kept distinct
- Hardness stated where the source listing states it
- 50-piece factory packs for workshops, individual packs for retail
- Pigskin and heat-stampable options published separately

## Problems It Solves

- A 50-piece pack arrives in a diameter that does not match the ferrules in stock
- Multi-layer and single-layer tips are sold as one product line
- Hardness is described as professional with no medium or hard stated
- Tips delaminate after a few weeks because the layers were poorly bonded
- A room cannot reorder the same tip because the listing carried no size

## Who It Is For

- Pool halls and clubs re-tipping house cues in batches
- Cue makers and repair shops buying by the fifty
- Distributors stocking a diameter ladder from 9 mm to 14 mm
- Brand owners packing tips under their own label
- Retailers selling individually packed tips at the counter

## Application Scenarios

- Batch re-tipping a rack of house cues in one session
- A pro shop offering while-you-wait tip replacement
- Retail pegboard packs sold by diameter
- OEM tips stamped with a brand mark
- Mixed-diameter stock for a room running several cue types

## Materials

- The source listing names no material for this item, so none is claimed here
- Material substitutions are raised before production rather than after arrival
- Where a material matters to your market, confirm it in writing with the order

## Manufacturing Process

1. Leather selected and, for multi-layer tips, laminated
2. Bonded under pressure so the layers hold
3. Cut and ground to the published diameter
4. Hardness checked against the grade being produced
5. Packed individually or into the published pack quantity
6. Inspected and cartoned

## Customisation Options

- Logo printed on the case and the packing, per the source FAQ
- Packing customised to retail, counter or bulk supply
- Colour options where the product publishes them
- Sample produced and approved before the production run
- Low minimum order quantity, with sample orders accepted

## Certification Standards

Production follows . Certificates are sent per product on request.

## Questions Buyers Ask

### How do I choose a tip diameter?

Match the ferrule, not the preference. A 13 mm tip on an 11 mm ferrule overhangs and mushrooms; the diameter on the product page is the one to order against the cues you already have.

### Are multi-layer tips better than single leather?

They behave differently rather than strictly better. Multi-layer tips hold shape longer under repeated impact; single leather is cheaper to replace often. Both are published here with their own pages.

### What hardness is published?

Medium and high hardness where the source listing states it. Where a listing states no hardness, the page does not assign one.

### Can tips be supplied heat-stamped with our mark?

The range includes heat-stampable medium-hardness tips. Whether your artwork suits the stamp area is confirmed at sampling.
