

PRODUCT FAMILY DATASHEET

Pool Cues

American-style and Chinese-style playing cues from entry-level house cues to carbon composite private cues, published with the tip diameter, the joint format and the forearm material.

What This Family Is For

This is the largest family on the site and the one where a specification matters most. A house cue for a club, a 1/2 split cue for a distributor and a carbon shaft private cue are three different purchases, and the pages below separate them by tip diameter, joint format and material instead of calling all three professional.

Products In This Family

Product	Group	Summary
Factory direct sale 1/2 billiard cue 13mm large tip professional American pool cue	Pool cue	13 mm tip, 1/2 jointed, built for American pool play.
Factory Direct Sale Chinese-style Carbon Billiard Cue, American Nine-Ball Small Tip, Medium Tip, Large Tip Integrated Cue Stick	Pool cue	Large tip, one-piece, carbon composite construction, built for American pool play.

Length	Not published on the source listing
Other tip sizes offered on this listing	8.5, 9, 10, 10.5, 11 and 12 mm
Other joint formats offered	3/4 jointed, One-piece
Other materials offered	Carbon composite, Fibreglass, Maple, Leather
Minimum order quantity	300 pieces, as stated on the source listing
Lead time	Not published on the source listing

Figures are reproduced from the manufacturer's published listings and may be revised. Rows reading 'not published' are figures the source listing does not publish; they are confirmed in writing rather than estimated. Confirm the current revision with your quotation.

Why Buyers Choose This Range

- Tip diameter published per product rather than described as large or small head
- Joint format stated as one-piece, 1/2 split or 3/4 split
- Forearm material named: maple, ash, purpleheart, fibreglass or carbon composite
- Stocked models available without waiting for a production slot
- OEM logo and packing accepted across the family

Problems It Solves

- A club replaces house cues every season because the tips shear off cheap ferrules
- A container arrives with joints that do not interchange between cues of the same model
- Players reject a cue because the tip is 13 mm when the room plays 11.5 mm
- Photographers sold a wrap that turns out to be printed film rather than a wrapped grip
- Entry-level and high-end cues arrive in the same carton with no way to grade them

Who It Is For

- Pool halls and clubs buying house cues in quantity
- Distributors carrying a graded range from entry to private cue
- Brand owners specifying their own logo and colourway
- E-commerce sellers who need one clear specification per listing
- Academies and training rooms replacing cues on a schedule

Application Scenarios

- House cue racks in a commercial pool hall
- Retail shelves where each SKU needs a printed specification
- Club member cues held in a locked rack
- Training rooms matching cue weight and tip size across a set
- Export orders mixing several models into one container

Materials

- The source listing names no material for this item, so none is claimed here
- Material substitutions are raised before production rather than after arrival
- Where a material matters to your market, confirm it in writing with the order

Manufacturing Process

1. Timber or composite selected against the published material
2. Shaft turned and tapered to the model's profile
3. Joint machined so halves interchange within the model
4. Ferrule fitted and the tip set to the published diameter
5. Wrap, inlay and finish applied
6. Inspected and packed for the destination

Customisation Options

- Logo printed on the case and the packing, per the source FAQ
- Packing customised to retail, counter or bulk supply
- Colour options where the product publishes them
- Sample produced and approved before the production run
- Low minimum order quantity, with sample orders accepted

Certification Standards

Production follows . Certificates are sent per product on request.

Questions Buyers Ask

What tip diameters are published in this family?

Individual products publish diameters between 9.5 mm and 13.8 mm depending on the model. Each product page states the figure its own source listing carries; where a listing gives a range, the range is reproduced rather than narrowed.

What is the difference between a 1/2 and a 3/4 split cue?

A 1/2 split joins at the centre of the cue and is the common American format. A 3/4 split joins closer to the butt, which is the traditional British and snooker format and keeps more of the shaft in one piece.

Can cues be made with our own logo?

Yes. OEM is accepted: logos are printed on packing and cases, and colourways are customisable. The artwork and the position are agreed before sampling.

Are these cues in stock?

Many models are published as in-stock or ready to ship on the source listings, and those pages say so. Availability on the day is confirmed by email.
