151 CATALOGUE REFERENCES

Narrow fabric woven in Foshan, Guangdong since 1996. Polyester, polypropylene, cotton, jacquard and elastic webbing, cord and string, silk printed tape, and the head and tail bands used in hardcover bookbinding. Every item is woven to the width and thickness you specify rather than picked from stock.

Dimensionally stable polyester tape for straps that must hold their shape, their colour and their rated load outdoors.

Polyester webbing is the default choice when a strap has to keep its length under load and its shade under sunlight. The fibre takes up almost no moisture, so wet strength barely drops and the tape washes and dries without shrinking back on itself.

The lightest webbing in common use, dope dyed for colour that cannot wash out and priced for high volume assembly.

Polypropylene is the lightest of all chemical fibres at 0.90 to 0.92 grams per cubic centimetre, around 20 per cent lighter than nylon and 30 per cent lighter than polyester. For bags, pet goods and packaging straps shipped by air, that difference shows up on the freight invoice.

Your logo woven into the strap itself on computer jacquard looms, so the branding cannot peel, crack or wash off.

In a jacquard ribbon the weft is fixed and the pattern is carried by the warp, the opposite of a woven label. That is why a jacquard strap reads cleanly along its length and why the plate and threading take real time to set up before the first metre runs.

Ring spun cotton tape with a soft matt face, specified by yarn count so the hand you approve is the hand you receive.

Cotton webbing is bought for its hand and its finish rather than for load figures. The variable that decides both is yarn count: the higher the count the finer the yarn, and the lighter, thinner and softer the finished tape.

Woven elastic tape that recovers to its original length, specified by stretch percentage rather than by feel.

Elastic webbing is judged on recovery, not on how far it stretches. A tape that pulls easily but comes back 5 mm longer every cycle will fail a garment or a strap within its first season.

Round and flat cord for drawstrings, handles and hang tags, matched to the webbing on the same product.

Cord is usually bought as an afterthought and it shows: a bag with a perfectly matched strap and a drawcord half a shade off. We dye cord from the same reference as your webbing so the two components agree.

Screen printed words and patterns applied after weaving, the economical route to branded tape when a jacquard plate cannot be justified.

Once a ribbon has been woven you can screen various words or patterns onto it, and that is generally cheaper than weaving the same detail directly. For short runs, seasonal artwork and text heavy designs, printing is simply the right answer.

Bookbinding headbands and endbands that finish the head and tail of a hardcover block, in cotton, linen and polyester.

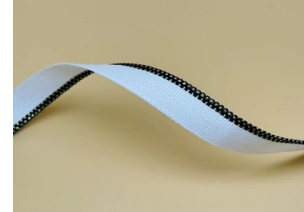

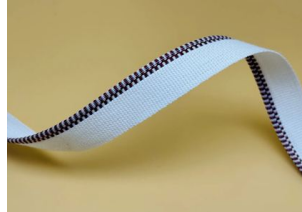

A headband, also called bookbinding tape or book edge tape, is webbing with decorative stitching along its edges. It is applied to the head and tail edges of a trimmed book block to conceal and finish the folded signatures while still revealing the sewing threads, which is where the name comes from.

Material	PP, cotton, polyester, nylon; eco-friendly and non-toxic yarns
Colour	Pantone matched or to your own reference
Thickness	0.65 mm to 2.5 mm or custom
Width	Made to your request
Logo Method	Computer jacquard
Testing	SGS
OEM	Welcome
Payment Terms	T/T, Western Union, PayPal
Shipping Terms	EXW, FOB, CIF
Sample Time	3 to 7 days
Production Time	7 to 15 days
Packing	50 yards for one roll 30 rolls for one carton or by your request
Minimum Order	1000 metres
