Who This Category Is For

Machine tool spindle rebuilders, pump and compressor OEMs, robotics and positioning equipment builders.

The Problem It Solves

Spindle-class bearings need a matched contact angle and precision grade, and buyers frequently receive the right bore size in the wrong preload or clearance class.

Core Technical Advantage

The contact angle carries axial load in one direction while running faster than a comparable roller bearing, which suits spindles, gas turbines and centrifugal machines.

Typical Applications

- Machine tool spindles
- Gas turbines and dither motors
- Centrifugal machines and pumps
- Mini car front wheels and reducers
- Instrumentation and pinion shafts
